## Ethiopian Wolf

This type of wolf is very close to extinction. There is only ~~1~~ estimated to be around 500 remaining. They are the most threatened carnivores in the world.

They have frequent outbreaks of rabies and distemper ~~can~~ transmitted through interaction with domestic dogs.

As a result, wolf numbers have fallen by at least 20% over the past 8 years with losses up to 40% within.

Sadly, threats to this ecosystem have devastating consequences on the family groups that live there.

## Adoption pack!

What it includes:

- Soft toy.
- Adoption pack.
- Adopt! magazine.
- A U for £3 a month.

It's our mission to save all animals from extinction. If you agree, I suggest you adopt from a small variety of endangered we have! We hope our animal accompanies you.

😊 Your facts really help me to think about adopting the Ethiopian wolf.
