How to be eco-friendly!

Do not ever leave the tap on when not necessary!

Never ever leave a tap on with the plug in, it will make your house flood. That's not very water smart!

Set a timer so the shower is not on for too long. Limit showers to 4 minutes.

Always remember to put your leftovers in a tub in the freezer or use the following day.

Recycle and compost food when you can.

Some areas will collect your food waste.

You could start a compost heap in your garden to dispose of waste responsibly.

Try not to buy too much food. Only buy what you will need.

When there is nobody in a room, you do not need the light on. It is wasting electricity.

Always make sure you turn off your electronic devices once you have finished with them.

When you leave a room, always turn the lights off. This will save electricity.

If you have lights in your garden, you could set a timer so they turn off when they are not needed.

You could attract birds and insects to your garden by:

- buying/making bird feeders

-buying bird houses

-planting fruit

-planting flowers

-making/buying bug houses

It is important that we do our best to reduce the amount of fuel we use every day.

If you are about to drive, think about whether it is close enough to walk or bike.

Try walking to school!

If you are cold, only put the heating on if it is necessary. Try putting an extra jumper on.
